

PowerShell post-exploitation, the Empire has fallen, You CAN detect PowerShell exploitation

Michael Gough

MalwareArchaeology.com

Who am I

- Blue Team Defender Ninja, Malware Archaeologist, Logoholic
- I love “properly” configured logs – they tell us Who, What, Where, When and hopefully How

Creator of

“Windows Logging Cheat Sheet”, “Windows File Auditing Cheat Sheet”

“Windows Registry Auditing Cheat Sheet”, “Windows Splunk Logging Cheat Sheet”

“Windows PowerShell Logging Cheat Sheet”, “Malware Management Framework”

NEW - “Windows HUMIO Logging Cheat Sheet”

v2.0

Co-Creator of “Log-MD” – Log Malicious Discovery Tool + LOG-MD

– With @BoettcherPwned – Brakeing Down Security PodCast

• Co-host of “*Brakeing Down Incident Response*” podcast

• @HackerHurricane also my Blog

PowerShell Exploitation

- Malware loves to use PowerShell to download and launch payloads

- They try and hide it too

- Red Teamers love PowerShell

- They love to hide too
- It is already built into the OS

- But they DO make noise and CAN be detected

- If you know how

PowerShell has Logs!

- You MUST enable them, not configured by default ;-(

“Windows Logging Cheat Sheet” (CMD LINE)

“Windows PowerShell Logging Cheat Sheet”

- Follow the guidance
- MalwareArchaeology.com/cheat-sheets

Module Logging

ScriptBlock Logging

Pipeline Execution Logging

Transcripts if you want

Profile.ps1 for PS v2

- nop (no Profile) will bypass this ;-(

WINDOWS POWERSHELL LOGGING CHEAT SHEET - Win 7/Win 2008 or later

This “Windows PowerShell Logging Cheat Sheet” is intended to help you get started setting up basic and necessary PowerShell (Windows Management Framework) command and command line logging. This list includes some very common items that should be enabled, configured, gathered and harvested for any Log Management program. Start with these settings and add to it as you understand better what is in your logs and what you need.

Sponsored by:

Discover IT

DEFINITIONS

ENABLE: Things you must do to enable logging to start collecting and keeping events.

CONFIGURE: Configuration that is needed to refine what events you will collect.

GATHER: Tools/Utilities that you can use locally on the system to set or gather log related information – AuditPol, WEvtUtil, Find, etc.

HARVEST: Events that you would want to harvest into some centralized Event log management solution like syslog, SIEM, Splunk, etc.

INFORMATION:

1. Why Enable and Configure PowerShell logging? PowerShell, which is found in the “Windows Management Framework” is the future way Microsoft will have us administer Windows. The Command line as we know it is going away and PowerShell will be taking over. Why is this important? PowerShell provides access to the .NET Framework which provides access to API calls that attackers can take advantage of and exploit and avoid Anti-Virus and other security controls in the process. PowerShell can be used to exploit a system with little noise or indicators in the logs unless properly enabled and configured to gather the PowerShell execution details. If you do not start enabling PowerShell logging options mentioned in this cheat sheet, attackers will be able to utilize and exploit your systems and do it quietly without additional file drops or noise generated by traditional malware and attacks. It is crucial to begin properly logging PowerShell to avoid this growing exploitation option. To understand what kind of PowerShell exploitation is available and being used, follow the following projects:
 - PowerSploit, PowerShell Empire, PowerShell, MetaSploit, Social Engineering Toolkit (SET) and PostSec

PS Event IDs – Windows PowerShell

Event Log: Windows PowerShell

| Event ID | v2 | v3 | v4 | v5 | Correlate | Auditing | Notes |
|----------|----|----|----|----|-----------|---|--|
| 400 | X | X | X | X | 403 | Always logged, regardless of logging settings | This even can be used to identify (and terminate) outdated versions of PowerShell running. |
| 403 | X | X | X | X | 400 | Always logged, regardless of logging settings | |
| 500 | X | X | X | X | 501 | Requires \$LogCommandLifeCycleEvent = \$true in profile.ps1 | This event is largely useless since it can be bypassed with the -nop command line switch |
| 501 | X | X | X | X | 500 | Requires \$LogCommandLifeCycleEvent = \$true in profile.ps1 | This event is largely useless since it can be bypassed with the -nop command line switch |
| 600 | X | X | X | X | 500 | Always logged, regardless of logging settings | |
| 800 | | X | X | X | 500 | ModuleLogging | This event is inconsistently logged with PowerShell V3 |

PS Event IDs – PowerShell/Operational

Event Log: Microsoft-Windows-PowerShell/Operational

| Event ID | v2 | v3 | v4 | v5 | Correlate | Auditing | Notes |
|----------|----|----|----|----|-----------|---|--|
| 4100 | | | | X | | | Logged when PowerShell encounters an error |
| 4103 | | | X | X | | ModuleLogging | May be logged along with 500 & 501 |
| 4104 | | | | X | | ScriptBlockLogging | |
| 40961 | | X | X | X | | Always logged, regardless of logging settings | |
| 40962 | | X | X | X | | Always logged, regardless of logging settings | |

- 4105 and 4106 too, but WAY too noisy to be of any value

What is Malware Using?

- LOTS of PowerShell
 - In most malware we see
 - Hearing it a lot in targeted attacks
 - Living off the land, all the files are already there
 - Just add script/commands and run
- PenTesters, The **RED TEAM** also loves them
- There are LOTS of PS post-exploit kits

They do this to hide what you see

- # • Bypass

Warning: Output capped at 200 elements

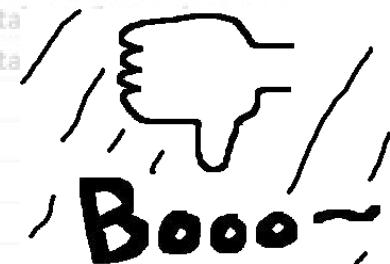

- ## • Hidden Window

They do this to hide what you see

- 4688 will capture this behavior
 - Enabling Process Command Line is key
- Bypassing stops the profile from loading in case there is any logging set (v2), hide the window, and ignore any execution policies
- YAY Microsoft.. Allows built-in bypasses
- LOTS of ways to spell the bypasses

PowerShell Logs show it too

- Windows PS logs (v2-v5) 400, 600
- Windows PS 500 IF command line enabled
 - But –NOP will not load profile.ps1 causing this to be basically worthless
 - And WHY upgrading to PowerShell v5 is so important
- PowerShell/Operational 800
 - Some versions of PowerShell (Pipeline Execution)

Security Log – 4688

PowerShell Log – 4104

Windows PowerShell Log - 400

Obfuscation

Fetch !!!

- They will try to hide or obfuscate their behavior to make it hard to read

• To me, this makes no difference, except I can't easily understand what they are doing

- They will add plus “+” to add/connect variables
- They will use ticks ‘ to break word checks
- They will use dollar \$ or percent % to designate variables
- So look for the “Odd Characters” that indicate obfuscation!

— You can thank Daniel Bohannon for this shtuff

— Or I should say \$Daniel #B'o^h^a^n^n^o'n#

Obfuscation – Odd stuff - 4688

- Becomes obvious very quickly.. This is BAD

- Count of characters are very telling once isolated or extracted from the blob

Obfuscation – Odd stuff - 4104

- Now you can't look for words, so adapt

Lots of special characters
some normal for PS

Even older PowerShell v2 Event ID 400

- Look for odd characters

```

Whitelisting PowerShell In the Logs

Filtering out the good, to find the bad

- PLEASE put a Mark/Sign/Secret Key in your scripts

YES!

Code your PowerShell for exclusion

- Make the scripts excludable on obvious things YOU or your company does or knows
- The path is awesome
 - All scripts excluded by path alone
 - Names, Secret Code, Key
 - Have your scripts contain something only you know that is a ‘secret key’ to exclude by
 - Or.. Sign your PS scripts

MalwareArchaeology.com

PowerShell Log Goodness

- Enable the logs per the Cheat Sheets

- PSv2 Logs (even if you have PS v5)

- Collect Event ID 200, 400, 500 and 800

- Windows PowerShell

- PSv5 Logs

- Collect 4100, 4104

- Microsoft-Windows-PowerShell/Operational

- Windows Logs

- Collect 4688 – WITH Process Command Line

Security Log

Event ID - 4688

- PS executed

- PS Bypass executed

- PS Suspicious buzzwords

- PS Count Obfuscation Characters (' + \$ % ;)

- There are others & #, etc. Tweak as needed

- You can look for large Scripts Blocks and Base64, but use the PS logs for this

PowerShell v2

- 200 – Command Health – WARNING, will give you some translation
- 400 – Engine Lifecycle – What executed
- 500 – Command Lifecycle - What executed and the command line if using profile.ps1 – and if “No Profile” (-nop) is not bypassed

PowerShell v2

Event IDs - 200 and/or 400

- PS Web Call

- PS Count Obfuscation Chars (' + \$ % ;)

- PS ScriptBlock size (> 1000)

- PS Base64 blocks

- PS WARNINGS

PowerShell v5

PowerShell/Operational Log

- 4100/4103 – Executing Pipeline - WARNING

- 4104 – Execute a Remote Command –
WARNING and Verbose

- No Obfuscation here, stripped out as it is executed, so you get clean code

- That big Base64 blob... now it is readable

PowerShell v5

Event IDs - 4100 and/or 4104

- PS Web Call

- PS Suspicious Commands (buzzwords)

- PS Count Obfuscation Chars (' + \$ % ;)

- PS ScriptBlock by size (> 1000)

- PS Base64 blocks

- PS WARNINGS

Summary

- LOG-MD will check your system and report
- Upgrade to PS v5 – NOW !
- Enable PowerShell logging !
- Use the “***Windows PowerShell Logging Cheat Sheet***” on what to set
- Create Reports and Alerts for the items discussed
- Maybe add Sysmon on a few systems
- Use the “***Windows Splunk and Humio Logging Cheat Sheets***” for some examples of what was discussed
- Send us your improvements and tweaks !!!!
- But **START LOGGING POWERSHELL !!!!**
